Warsaw, Poland

[LinkedIn](#) | [GitHub](#) | [Website](#)

SUMMARY

Full-stack engineer with 4+ years of commercial experience building backend services, APIs and integrations in Node.js/TypeScript (Nest.js, GraphQL), with hands-on work in a production Python codebase (FastAPI, SQLAlchemy). Built multi-tenant services with PostgreSQL and Redis, enterprise SSO across four identity providers, and React/Next.js internal tools used daily by operations and content teams. Comfortable owning delivery end to end, including coordinating directly with client engineering teams and third-party vendors.

SKILLS

Backend	Node.js, TypeScript, Nest.js, Express, Python, FastAPI, GraphQL, REST
Frontend	React, Next.js, TypeScript, Redux, Tailwind CSS, Radix UI, Ant Design
Databases & ORM	PostgreSQL, Redis, CockroachDB, MongoDB, Prisma, TypeORM, MikroORM, SQLAlchemy
Auth & Security	SSO (Auth0, Okta, Microsoft Graph, PingOne), multi-tenant data isolation, role-based access control
Cloud & DevOps	Docker, AWS (S3, Lambda, RDS, ECS), CI/CD (GitHub Actions), Redis, Nginx, Git
Testing	Jest, Vitest, Playwright
Integrations	Stripe, Payload CMS, SendGrid, Chrome Extensions API (MV3)
Languages	English (C1), Ukrainian (native)

EXPERIENCE

Full-Stack Developer - Apiko	Apr 2022 - Present
Digital transformation consultancy; delivered full-stack products for international clients.	

Dexter - event sales & lead-intake platform for restaurants and hotels (teamdexter.com)	Jun 2026 - Sep 2026
Embeddable inquiry forms that capture and qualify private event leads and route them to the venue's event management system or inbox.	

- Led a 3-person team: ran daily standups with the client, split the work into deliverables, and coordinated delivery end to end.
- Built a generic, JSON-driven form engine: form structure and fields defined as JSON and rendered with themeable CSS classes, so a new brand-specific form is configuration rather than new code.
- Delivered per-customer brand theming so each venue's embedded form matches its own site's look.
- Implemented iframe-based embedding and built and deployed branded forms for 40+ venue customers, integrating them into their own CMS platforms. (WordPress, Webflow, BentoBox).
- Configured an AI-assisted onboarding workflow that brings a new customer fully live in 2-3 hours.

Stack: TypeScript, NestJS, GraphQL (Apollo), MongoDB, React, Vite, Ant Design, Socket.IO, Sentry, AWS S3, CloudFront

Internal Recruitment & Employee Management Platform	Jul 2025 - Feb 2026
Internal system used by the company's recruitment and accounting teams	

- Took over an unmaintained internal platform as the sole engineer and brought it back into daily use by the recruitment and accounting teams.
- Cut a key candidate-listing endpoint from ~20s to ~2s (50 rows over a 10,000-record candidate collection) by indexes, query rewrite.
- Migrated the stack from Node.js v14 to v22 and rebuilt the UI with shadcn/ui, modernising a 5-year-old codebase without interrupting its users.
- Built automatic PDF CV generation for employees from their stored profile data, replacing manual document preparation.

- Implemented ATS-style scoring over incoming applications, ranking CVs against each vacancy so recruiters see the strongest candidates first.
- Per user feedback, the rebuilt system roughly halved the time recruiters and accounting spend on daily tasks and made pipeline status visible in one place.

Stack: Fastify, MongoDB, Mongoose, React, shadcn, GitLab CI, AWS S3

Hotaly - multi-brand venue listing platform (hotal.co.uk)Sep 2024 - Jun 2025

Unified venue and event platform running several branded sites for different market segments from a single codebase.

- Maintained and extended the Python FastAPI backend (SQLAlchemy, PostgreSQL) behind the venue search, availability, and booking APIs consumed by the branded front-ends.
- Reduced response time of the venue filter endpoint by adding a composite index and removing an N+1 query.
- Built 3 distinct branded sites from one Next.js codebase: middleware resolves the active brand from the hostname and injects per-brand design tokens, layout, and SEO, with zero code duplication.
- Developed the internal Radix UI dashboard for listing management, featured-slot scheduling, and S3-backed media uploads, the primary daily tool for the client's content operators.
- Designed the Payload CMS content model with per-brand access control and reusable field groups, so editors manage all brands from one interface without duplicated content entry.

Stack: Python, FastAPI, SQLAlchemy, PostgreSQL, Redis, Next.js, Payload CMS, AWS S3

Andy's Bet Club - Premier League prediction game (andysbetclub.co.uk/predictor)Feb 2024 - May 2024

Prediction platform where users compete for cash prizes on live accuracy leaderboards.

Mar 2026 - May 2026

- Launched prediction platform that reached 40,000+ registered users in the first 7 days
- Built Redis-backed leaderboard serving sub-millisecond rank lookups under peak concurrent submission load
- Scoring engine recomputed full 20-team table rankings for all users after every matchday (position-weighted points)
- Football data sync service with caching + retry logic that kept scoring available even during third-party API outages

Stack: TypeScript, React, Ant Design, Nest.js, GraphQL, PostgreSQL, Prisma, Redis

Lanai - enterprise AI-monitoring SaaS (withlanai.com)Apr 2022 - Jan 2024

Platform giving enterprise security teams real-time visibility into all employee AI usage - including unapproved tools - via prompt-level analysis.

- Built a Manifest V3 Chrome extension that intercepts AI requests across any provider (ChatGPT, Copilot, Gemini) by inspecting request content rather than hardcoded URL lists - auto-compatible with tools that didn't exist yet, with zero measurable impact on tab performance.
- Designed a multi-tenant Nest.js backend with row-level tenant isolation (CockroachDB + TypeORM) and a unified SSO pipeline integrating 4 enterprise identity providers - Auth0, Okta, Microsoft Graph, PingOne - resolved per tenant at request time.
- Took full ownership of all third-party integrations after the team scaled down from 6 developers to 2 - coordinating directly with vendor support and the client's engineering team.
- Developed the Next.js admin panel for policy configuration and per-user usage, cost, and violation dashboards.

Stack: TypeScript, Next.js, Nest.js, Chrome Extensions API (MV3), CockroachDB, PostgreSQL, TypeORM, Auth0, Okta, Microsoft Graph, PingOne, AWS Lambda

EDUCATION

Master’s Degree in Software Engineering2024 - 2026

West Ukrainian National University

Bachelor’s Degree in Software Engineering2020 - 2024

West Ukrainian National University
